

Trackon Legacy

Commercial Proposal: Commodity Trading ERP

Prepared for: Mr. Ayhan Yalcintas & Mr. Fatih Ziya Akdogan

Prepared by: Trackon Software FZCO, Dubai, UAE

Date: 3 July 2026 · Valid for 30 days

Who We Are

Trackon Software FZCO is a Dubai-based (JLT/DMCC) software vendor specialised in **commodity trading and logistics**.

- **Trackon Legacy:** full ERP/CTRM for commodity trading companies: contracts, positions, shipments, inventory, invoicing, and finance in one system. **Proven in production for over a decade** with active trading houses.
- **TrackonAI:** our modern, AI-powered logistics & contract execution platform. Integrates with third-party accounting systems.

| Our customers run physical trading of agri-commodities across the Gulf, Africa, Asia, and the Americas.

Understanding Your Needs

You are launching a **new commodities trading company**, funded and ready to move. You need:

- A **complete, proven back-office** from day one, with no stitching together of tools
- **Contract-to-cash coverage**: purchase/sale contracts, shipments, documents, stock, invoicing, accounting
- A system that **scales with the team** as you grow beyond the initial **10 users**
- Predictable monthly cost with **no upfront license purchase**

Our recommendation: Trackon Legacy, the all-inclusive ERP, delivered as a managed cloud subscription.

What's Included in Trackon Legacy

Area	Coverage
Trading	Purchase & sale contracts, positions, pricing, counterparties
Logistics	Shipments/journeys, vessels, B/L & shipping documents
Inventory	Warehouses, in-transit stock, consignments
Finance	Invoicing, payments, ledgers, multi-currency
Reporting	Operational reports across trading, logistics, finance
Delivery	Fully managed cloud (AWS), backups & DR included

All modules included in the subscription: **one system, one monthly fee.**

Deployment Options

	Option A: Shared ★ Recommended	Option B: Dedicated	Option C: Dedicated + DR
Infrastructure	Multi-tenant, isolated schema	Dedicated server, single zone	Dedicated + automatic failover
Uptime commitment	Best efforts	99.5% target + service credits	99.5% target + service credits
Disaster recovery	Standard backups	Standard backups	Standby server in 2nd zone
Best for	Fast, economical start	Data isolation requirements	Business-critical continuity

All options include daily backups, 7-day point-in-time recovery, and cross-region backup replication.

Track record: our measured historical uptime across all existing customers is **99.99%**.

Pricing for 10 Users

Monthly subscription, in AED (excl. 5% VAT):

Component	A: Shared ★	B: Dedicated	C: Dedicated + DR
Server fee	4,593	10,475	20,950
Users (10 × 765)	7,648	7,648	7,648
Total / month	12,241	18,123	28,598
Implementation (one-time)	15,000*	15,000*	15,000*
Server setup (one-time)	Included	25,000–35,000	25,000–35,000

- *Discounted startup package; standard implementation for a trading company is USD 30,000–40,000 (see next slide)
- Additional users: **AED 765 / user / month**, add anytime
- Upgrade between options at any time; takes effect within the term

Implementation & Onboarding

A standard Trackon Legacy implementation for an established trading company is **USD 30,000–40,000**: historical data migration, process re-engineering, and a backlog of custom reports.

As a new company, you start clean. No legacy data to migrate, processes configured right from day one, and the standard report pack covers you at launch. We pass that efficiency on:

Startup implementation package: AED 15,000 (one-time)

- **Data setup**: counterparties, products, warehouses, opening balances
- **Business process setup**: workflows configured to how you trade
- **Standard reports**: full system report pack with your company header/footer
- **Pending reports**: analysis and development of reports identified during implementation
- **Training** for your team of 10

Custom-designed documents and bespoke report development beyond this scope are quoted separately under a Statement of Work.

Optional Add-Ons

Add-On	What It Gives You	Monthly (AED)
Dashboard Module	Management dashboards & KPIs on top of trading data	9,188
Reporting Instance	Dedicated read-only reporting database (daily refresh)	10,475
Extended Support	Telephone / extended-hours support	On request

Third-party integrations (accounting systems, banks, data providers) are delivered via Trackon's managed API layer under a separate ISV/integration arrangement.

Our Recommendation: Start Lean

For a new company, we recommend starting with **Option A (Shared), 10 users, no add-ons:**

Starting package	Amount
Monthly subscription	AED 12,241
One-time implementation	AED 15,000

- Everything you need to run trading, logistics, and finance from **day one**
- **No idle infrastructure cost** while you build the team and the book
- **Grow when ready:** add users anytime (AED 765/user), and move to a dedicated server, DR failover, dashboards, or a reporting instance as volumes grow
- Upgrades can take effect **during the term**, so you are never locked into the starting setup

Service Levels & Support

- **Support channels:** ticketing portal + email (included)
- **Support hours:** Mon–Fri, 09:00–18:00 GST (UAE business days)

Severity	Example	Initial Response
Critical	System unusable	4 business hours
High	Major function impaired	8 business hours
Medium	Partial issue, workaround exists	1 business day
Low	Question / minor issue	2 business days

Recovery objectives: same-region RTO ~4 hours, near-zero RPO (continuous point-in-time recovery). Scheduled maintenance: Sundays 10:00–14:00 GST.

Commercial Terms

- **Contract:** Trackon SaaS Master Service Agreement (MSA) + Order Form
- **Initial term:** 12 months, renews annually
- **Invoicing:** monthly in advance; payable within 30 days
- **Your data is yours:** full ownership, CSV export rights, 30-day post-termination retrieval
- **Data protection:** dedicated schedule covering processing roles, security safeguards, and incident notification
- Prices exclude 5% VAT · Governed by UAE law

Why Trackon

- **Purpose-built for commodity trading**, not a generic ERP adapted later
- **Proven**: live with active trading companies for 10+ years
- **Fast onboarding**: a new company can be operational in weeks, with clean master data from day one (no legacy migration!)
- **Local**: Dubai-based team, GST-timezone support, UAE contracts
- **A growth path**: TrackonAI available when you want AI-driven document and logistics automation alongside the ERP

Next Steps

1. **Confirm your starting setup** (our recommendation: Option A, 10 users)
2. We issue the **Order Form + MSA** for signature
3. **Onboarding & training** for your team of 10
4. **Go live**, typically within 2–4 weeks for a new company
