

Claim Portal for Mana

A guided, wizard-based portal where Mana's users raise claims step by step, claims are reviewed and approved or rejected in a controlled workflow, and approved claims land in Mana's Trackon system automatically — no re-keying.

Prepared for Josh Hosking · Mana

Murat Selim Ozturk · CEO, Trackon Software FZCO

THE OBJECTIVE

What we are solving

Today, raising a claim depends on emails, spreadsheets and manual entry. Details arrive incomplete, supporting evidence is scattered, and someone still has to key the final claim into the system by hand.

The **Claim Portal** replaces that with a guided wizard: the user is walked through the claim step by step, required details and supporting documents are collected up front, and nothing can be submitted incomplete.

Every claim then passes through a formal **approve / reject** step. Only approved claims are created in Mana's Trackon system — automatically, through Trackon's own business rules.

Guided, step-by-step entry

Complete claims only

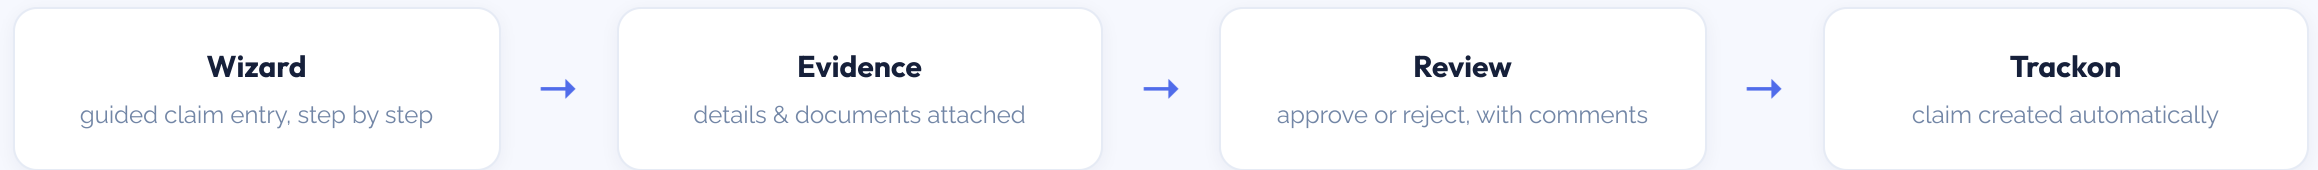

Controlled approval

No re-keying

HOW IT WORKS

From first entry to a claim in Trackon

THE CLAIM JOURNEY

- The wizard validates as the user goes — mandatory fields, amounts, references and attachments are checked **before** submission, not after.
- Reviewers see the full claim with its evidence in one place and approve or **reject with a reason**; the submitter is notified either way.
- Rejected claims never touch the Trackon system. Approved claims are created through Trackon's real business rules, so what lands is always valid.

THE EXPERIENCE

Built for the people filing claims

For submitters

- A wizard that asks one thing at a time — no blank forms, no guesswork
- Upload supporting documents directly into the claim
- See the status of every claim: submitted, in review, approved, rejected
- Clear rejection reasons, so a claim can be corrected and resubmitted

For reviewers

- A single queue of pending claims, complete with evidence
- Approve or reject with comments in one click
- Full audit trail — who filed, who decided, when and why
- Approved claims appear in Trackon with zero manual entry

Claim types, required fields, evidence rules and the approval chain follow what we defined together in our working sessions.

THE FOUNDATION

One foundation, two projects

Creating a claim in Mana's Trackon system safely requires the same **secure API foundation** we scoped in the Salesforce → Trackon integration: an authenticated layer that creates records through Trackon's own business rules rather than writing raw data.

That foundation is **built once and shared**. The Claim Portal and the Salesforce integration run on the same foundation — and every future integration inherits it for free.

Shared with the Salesforce integration

Built through Trackon's real business rules

Reusable for future projects

CLEAR BOUNDARIES

What sits where

Trackon delivers

- The wizard-based Claim Portal (web, secure sign-in)
- Approval / rejection workflow & notifications
- Document upload & storage with the claim
- Automatic claim creation in Mana's Trackon system
- Audit trail, monitoring and support
- Testing, go-live and training

Mana provides

- Claim types, required fields and business rules
- The approval chain — who reviews, who decides
- The list of portal users and their roles
- Sample historical claims for testing
- A working session or two during design
- UAT participation before go-live

YOUR INVESTMENT

Capped hours. You never pay more.

The design is already clear from our working sessions together, so we go straight to build. The whole engagement — meetings, development, testing and go-live — is billed on actual time at **\$100/hour**, capped at **160 hours**.

MAXIMUM INVESTMENT

This scope, delivered

\$16,000

Hard cap · 160 hours · includes meetings, development, testing and go-live

PAY ONLY FOR TIME USED

Actual hours billed

≤ 160 h

Finish in fewer hours and you are invoiced only the time spent. Take longer for any reason within this scope — the overrun is **ours**, the cap holds.

ONCE LIVE · RECURRING

Portal Hosting, Monitoring & Support

Secure hosting, monitoring, error handling, user support and minor adjustments.

from ~\$500/mo

Prices in USD, exclusive of any applicable taxes.

BUILD & GO-LIVE

Workstreams

WORKSTREAM	SCOPE
Claim wizard	Guided multi-step entry with live validation and document upload
Approval workflow	Review queue, approve / reject with comments, notifications, audit trail
Claim creation	Approved claims created in Mana's Trackon system through its business rules
Users & access	Secure sign-in, roles for submitters and reviewers
Test & go-live	End-to-end testing with real claim samples, UAT, deployment, training

MAXIMUM · ALL WORKSTREAMS

\$16,000

Everything above is covered by the **160-hour cap** — meetings, development, testing and go-live included. Actual hours are reported transparently and invoiced as spent, never beyond the cap.

FOR CLARITY

Assumptions

- The scope baseline is what we defined together in our working sessions: wizard-based claim entry, approve / reject workflow, and automatic claim creation in Mana's Trackon system.
- The **160-hour / \$16,000 cap** applies to this scope, including meetings, development, testing and go-live. Time is billed at \$100/hour on actual hours spent, never beyond the cap.
- Portal users are **Mana's users**; the user list and roles are provided by Mana.
- Approved claims are created in Mana's Trackon system through its business rules; everything downstream of claim creation works as it does today.
- Mana provides sample historical claims for testing and participates in UAT.
- Changes to claim types or workflow beyond this scope are quoted separately as amendments.

NEXT STEPS

Let's get started

- 1 Confirm the go-ahead: maximum **\$16,000**, capped at 160 hours, this scope delivered.
- 2 Short kickoff to lock the wizard screens and the approval chain from our working sessions.
- 3 We build, test with your team, and go live — **actual hours invoiced, never beyond the cap.**
