

COMMERCIAL PROPOSAL · AUGUST 2026

One System from Dubai to Every Shop in Africa

Head-office trading, shipping and finance on Trackon, with a mobile Point of Sale app for your shop staff on any Android or iPhone. Scope, implementation plan and pricing for 40 users, with two platform options.

Prepared for Spectrum DMCC

Murat Selim Ozturk · CEO, Trackon Software FZCO

YOUR OPERATION

What we understood

Head office, Dubai

Buys the goods, arranges **international shipping**, and moves stock to the depot and shops in Africa. Needs full visibility: what was bought, what is on the water, what is in each shop, and what each shop earns.

Shops in Africa

Staff work on **mobile phones only**. Each shop must **accept incoming goods, sell**, and **record its own expenses**, with as few taps as possible. Adding their own customers comes later.

40 users, one system

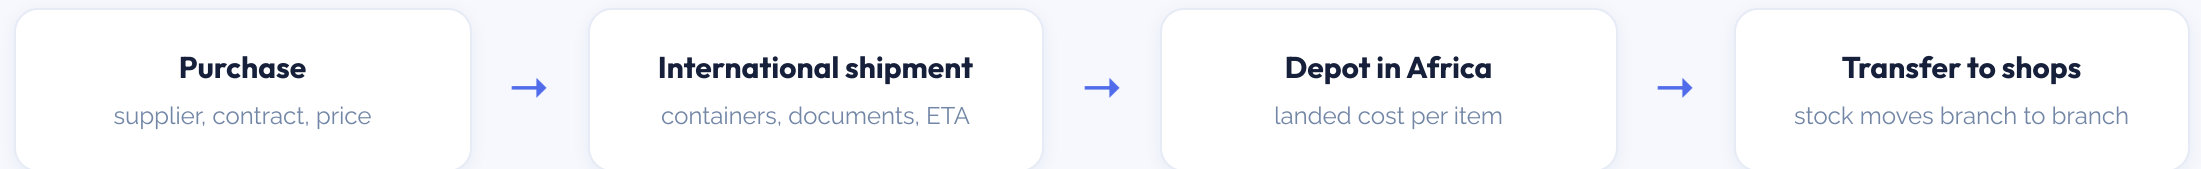

A small head-office team on the full system and a larger number of shop users on a focused app. The shop users should not carry the cost of a full ERP seat, and in this proposal they do not.

In our last meeting we showed you shop profitability and the new mobile POS screens. This document turns that into a concrete scope and price.

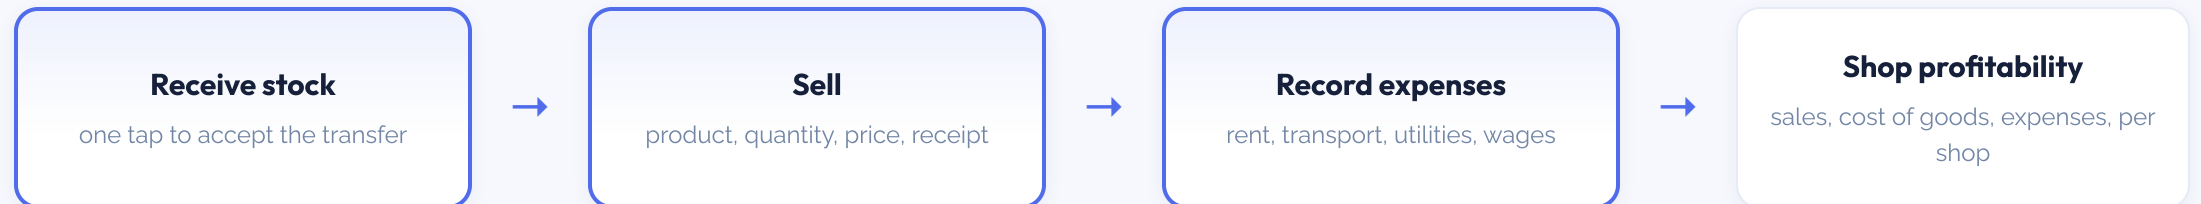

THE SOLUTION

From purchase to shop shelf to profit

HEAD OFFICE · TRACKON

SHOPS · MOBILE POS APP

Every shop transaction lands in the same books the head office runs on. No re-keying, no spreadsheets, profitability per shop and per product as shown in the demo.

HEAD OFFICE

What the head office runs on Trackon

AREA	COVERAGE
Purchasing	Supplier contracts, purchase orders, prices, counterparties, payment terms
International shipping	Shipments and containers, shipping documents, ETAs, arrival at the depot
Landed cost	Freight, clearing, transport and other costs allocated to the goods, so every item carries its true cost into the shops
Stock and transfers	Depot and shop warehouses, transfers between branches, stock in transit, stock on hand per shop
Finance	Sales and purchase invoices, shop expenses, payments, ledgers, multi-currency (AED, USD, local currencies)
Reporting	Sales per shop, stock per shop, expenses per shop, profitability per shop and per product, plus the standard report pack

Every shop is a branch with its own warehouse and its own books. The head office sees all of them; each shop sees only its own.

SHOPS

The mobile POS app for your shop staff

Ready today **DEMONSTRATED**

- **Sell:** pick the product, quantity and price, confirm, receipt on screen
- **Receive Stock:** incoming transfers from the depot, accepted with one tap
- **Inventory** and **Product Search:** what the shop has on hand
- **Sales** and **Today:** the shop's own sales history and the day so far

Added for Spectrum **IMPLEMENTATION**

- **Record Expenses:** shop staff record rent, transport, utilities and other costs against their shop; head office approves and the expense flows into the shop's profitability
- Your logo and receipt layout, your product list, your currencies
- **Later:** shops add their own customers and sell on account. Kept out of this phase deliberately; added when you ask for it.

Any Android or iPhone. The app installs from a link to the phone's home screen, opens full screen, and runs on mobile data. No app store, no device management. Each user sees only the shop they are assigned to.

IMPLEMENTATION

The work we will do

WORKSTREAM	WHAT WE DO	INPUT FROM SPECTRUM
Company and shop setup	Dubai head office, the depot and every shop as a branch with its own warehouse; currencies, tax, chart of accounts, users and roles	List of shops and staff
Master data and opening balances	Products, suppliers, customers, opening stock per shop and opening balances loaded from your Excel files	Data in our Excel templates
Head-office processes	Purchase contracts, international shipments, landed cost, transfers to the depot and shops, configured to how you work	Two working sessions
Shop app rollout	POS app configured per shop; the new Record Expenses screen built and approved; your branding; home-screen install on staff phones	Approval of the expenses screen
Reports	Standard report pack with your header and footer; sales, stock, expenses and profitability per shop and per product	Sign-off
Training and go-live	Head-office training online; short sessions for shop staff with one-page guides; go-live support and two weeks of hypercare	Availability of staff

TIMELINE

Live in six weeks

WEEK 1

Kick-off and setup

branches, shops, warehouses,
users, currencies, accounts

WEEKS 2 TO 3

Data and processes

master data and opening stock
loaded · head-office processes
configured

WEEKS 3 TO 4

Shop app

per-shop configuration · Record
Expenses screen · branding

WEEK 5

Training

head office online · shop staff
by shop

WEEK 6

Go-live

first live sales · two weeks
hypercare

The mobile app already exists and runs on your own environment, so the timeline is driven by data readiness and staff availability, not development. **Your monthly subscription starts at go-live, not at signature.**

OPTION A · RECOMMENDED

Trackon with the mobile POS app

ITEM	DETAIL	MONTHLY (AED)
Trackon platform, shared cloud	Database, application servers, daily backups, monitoring, upgrades	4,593
Head-office users, 10 × 765	Full system: purchasing, shipping, stock, finance, reports	7,650
Africa shop users, 30 × 190	Mobile POS app: sell, receive stock, expenses, inventory, sales	5,700
Mobile POS app for every shop	Already built and demonstrated	Included
Record Expenses screen	Built during implementation	Included
Profitability per shop and product	Standard reports with your header and footer	Included
Total for 40 users		17,943

MONTHLY · FROM GO-LIVE

AED 17,943

first 3 months at 50%: AED 8,972 per month

ONE-TIME · IMPLEMENTATION

AED 30,000

all six workstreams, incl. the expenses screen

Africa shops rate: AED 190 per user, 75% below the standard AED 765. Shop staff need one focused app, not a full ERP seat. Add users any time at the same rates.

Implementation invoiced on acceptance. Subscription monthly in advance from go-live. Prices in AED, exclusive of 5% VAT. Dedicated server available on request.

TrackonAI, our next-generation product

TrackonAI is the platform we launched after Trackon: cloud-native, built for smaller and mid-size trading operations, with an AI assistant you can ask questions about your own data and reports you design yourself. It is the newer product, live with its first customers since 2025, and we can provide it to Spectrum as well.

What you would gain

- Modern interface, no server fee, same profitability logic: purchase price, freight, landed cost and shop expenses traced to every sale
- **AI assistant:** ask "which shop sold the most this week" and get the answer from your live data
- **Self-service reports:** design and change your own reports and document templates
- Approval workflows you define, WhatsApp approvals, sanctions and vessel tracking available as add-ons

What is different for Spectrum

- The shop screens (sell, receive, expenses) exist today on Trackon. On TrackonAI they are **built for you during implementation** on its mobile-friendly interface
- Go-live in **10 to 12 weeks** instead of six
- A younger product: fewer years in production, a faster release cycle
- A migration path from Trackon to TrackonAI exists, so choosing Option A today does not close this door

OPTION B · PRICING

TrackonAI for 40 users

ITEM	DETAIL	MONTHLY (AED)
TrackonAI platform	Cloud-native, no server fee; AI assistant with a monthly usage allowance	Included
Head-office users, 10 × 1,098	Full platform: purchasing, shipping, stock, finance, self-service reports	10,980
Africa shop users, 30 × 190	Mobile shop screens built on TrackonAI, same Africa shops rate	5,700
Profitability per shop and product	Automatic cost tracing, built in	Included
Total for 40 users		16,680

MONTHLY · FROM GO-LIVE

AED 16,680

first 3 months at 50%: AED 8,340 per month

ONE-TIME · IMPLEMENTATION

AED 45,000

incl. building the shop screens on TrackonAI

Lower monthly, higher one-time, longer to go live. [Our recommendation is Option A](#): the shop app is ready, you have seen it, and your shops can be selling on it in six weeks.

Implementation invoiced on acceptance. Subscription monthly in advance from go-live. Prices in AED, exclusive of 5% VAT.

SIDE BY SIDE

Choosing between the two

	OPTION A · TRACKON	OPTION B · TRACKONAI
Maturity	In production with trading houses for over ten years	Newer platform, live with first customers since 2025
Shop app	Ready and demonstrated on your environment	Built for you during implementation
Time to go-live	6 weeks	10 to 12 weeks
Reports	Standard pack, built by Trackon to your needs	Self-service designer plus AI assistant
Monthly, 40 users	AED 17,943	AED 16,680
One-time	AED 30,000	AED 45,000
Best for	Selling from your shops this quarter	A longer runway and a preference for the newest platform

Both options use the same Africa shops rate of AED 190 per shop user. Confirm your choice with your acceptance.

FOR CLARITY

The prices assume

- **10 head-office users and 30 shop users.** If your split differs, the total adjusts at the unit rates shown; nothing else changes.
- Each shop is one branch with one warehouse. Shop phones have mobile data; the app works online. Working without connectivity is possible as a separate, scoped piece of work.
- Spectrum provides master data and opening stock in our Excel templates; Trackon loads and validates them.
- Reports are the standard pack with your header and footer plus the shop reports listed. Bespoke documents and reports beyond that are quoted separately.
- Support: ticketing portal and email, Monday to Friday 09:00 to 18:00 Dubai time; response within 4 business hours for system-down issues.
- Contract: Trackon SaaS agreement, 12-month initial term, annual renewal. Your data is yours, with export rights. UAE law.
- Proposal valid to **25 September 2026**; the six-week timeline holds for acceptance within that window.

NEXT STEPS

Let's put your shops on it

- 1 Accept by **25 September 2026** and confirm Option A or B, plus your head-office and shop user counts.
- 2 We issue the agreement and the implementation invoice, and send the Excel templates for your shops, products and stock.
- 3 Kick-off the following week. With Option A your shops are selling on the app **six weeks later**.
